FAHMI IRFAN

Information Systems Undergraduate | Software & Data Engineering
Email: fhmiirfn2006@gmail.com | GitHub: github.com/fahmiirfan | Location: Indonesia

PROFESSIONAL OVERVIEW

Information Systems student focused on Software Engineering, Data Analytics, Data Engineering, and Web Development. Experienced in designing normalized PostgreSQL schemas, analytical SQL pipelines, and full-stack TypeScript/Next.js web apps.

TECHNICAL FOCUS & SKILLS

- Software & Web: TypeScript, JavaScript, Python, SQL, React, Next.js, Node.js, Tailwind CSS, REST APIs
- Data Systems: PostgreSQL, DuckDB, Pandas, NumPy, Window Functions, Cohort Analysis, Star Schema ETL, Scikit-Learn
- Infrastructure: Git, GitHub Actions, Docker, Prisma ORM, Linux/WSL

SELECTED ENGINEERING & DATA PROJECTS

1. Modular Inventory & Procurement Management System [TypeScript, Next.js, PostgreSQL, Prisma]
   Designed 14-table 3NF schema and ACID append-only stock ledger preventing negative stock race conditions.
2. Retail Sales & Customer Cohort Retention Analytics [SQL, Python, Pandas, DuckDB]
   Processed 500k+ invoice rows into monthly cohort retention matrices and NTILE 5 RFM customer segments.
3. Automated Operational ETL & Dimensional Data Warehouse [Python, PostgreSQL, Kimball Star Schema]
   Engineered idempotent Bronze/Silver/Gold batch ELT pipeline with SCD Type 2 dimensions and SQL quality checks.
4. Campus Lab & Shared Facility Scheduling Platform [Next.js, TypeScript, PostgreSQL btree_gist]
   Built conflict-free reservation platform using PostgreSQL tstzrange exclusion constraints.
